

Diamond Math Problems

Complete the diamond problems. The top cell contains the **product** of the numbers in the left and right cells, while the bottom contains the **sum**.

(1)
$$\begin{array}{c} \diagup \quad 21 \quad \diagdown \\ \diagdown \quad 10 \quad \diagup \end{array}$$

(2)
$$\begin{array}{c} \diagup \quad -48 \quad \diagdown \\ \diagdown \quad -8 \quad \diagup \end{array}$$

(3)
$$\begin{array}{c} \diagup \quad -18 \quad \diagdown \\ \diagdown \quad 7 \quad \diagup \end{array}$$

(4)
$$\begin{array}{c} \diagup \quad 60 \quad \diagdown \\ \diagdown \quad 16 \quad \diagup \end{array}$$

(5)
$$\begin{array}{c} \diagup \quad 150 \quad \diagdown \\ \diagdown \quad -25 \quad \diagup \end{array}$$

(6)
$$\begin{array}{c} \diagup \quad 66 \quad \diagdown \\ \diagdown \quad -17 \quad \diagup \end{array}$$

(7)
$$\begin{array}{c} \diagup \quad -32 \quad \diagdown \\ \diagdown \quad 4 \quad \diagup \end{array}$$

(8)
$$\begin{array}{c} \diagup \quad 126 \quad \diagdown \\ \diagdown \quad -23 \quad \diagup \end{array}$$

(9)
$$\begin{array}{c} \diagup \quad 88 \quad \diagdown \\ \diagdown \quad 19 \quad \diagup \end{array}$$

(10)
$$\begin{array}{c} \diagup \quad -14 \quad \diagdown \\ \diagdown \quad 5 \quad \diagup \end{array}$$

(11)
$$\begin{array}{c} \diagup \quad 90 \quad \diagdown \\ \diagdown \quad 19 \quad \diagup \end{array}$$

(12)
$$\begin{array}{c} \diagup \quad -16 \quad \diagdown \\ \diagdown \quad -6 \quad \diagup \end{array}$$

(13)
$$\begin{array}{c} \diagup \quad 30 \quad \diagdown \\ \diagdown \quad 13 \quad \diagup \end{array}$$

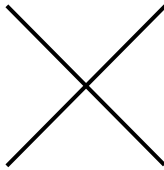

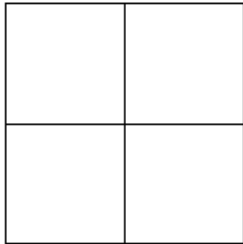

(14)
$$\begin{array}{c} \diagup \quad -81 \quad \diagdown \\ \diagdown \quad 0 \quad \diagup \end{array}$$

(15)
$$\begin{array}{c} \diagup \quad 99 \quad \diagdown \\ \diagdown \quad -20 \quad \diagup \end{array}$$

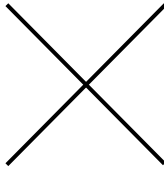

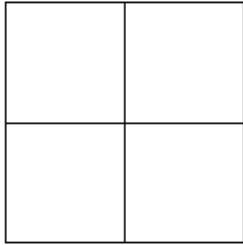

(16)
$$\begin{array}{c} \diagup \quad 99 \quad \diagdown \\ \diagdown \quad 20 \quad \diagup \end{array}$$

Factoring Trinomials

Example: $x^2 - 4x - 32$

Steps (written out)	Steps (worked out)
<p>1) Multiply a and c together. Place that number in the bottom of the x.</p> <p>Place b in the top of the x.</p> <p>Find two numbers that multiply to get the bottom number and add to get the top number.</p>	
<p>2) Create a 2x2 box and place the first term of your original binomial in the first box. Place the last term of your original binomial in the last box.</p> <p>Fill in the remaining 2 boxes with the numbers on the left and right of your x from above. Be sure to place an x after each number.</p>	
<p>3) Find the GCF of each row and column and write it in the corresponding area. Write these as the two binomials for the factored form.</p>	<p>Factored Form:</p> <p>_____</p>
<p>4) Check you work by multiplying the binomials together to see if you get your original trinomial.</p>	

Example: $5v^2 + 27v + 10$

Steps (written out)	Steps (worked out)
<p>1) Multiply a and c together. Place that number in the bottom of the x.</p> <p>Place b in the top of the x.</p> <p>Find two numbers that multiply to get the bottom number and add to get the top number.</p>	
<p>2) Create a 2x2 box and place the first term of your original binomial in the first box. Place the last term of your original binomial in the last box.</p> <p>Fill in the remaining 2 boxes with the numbers on the left and right of your x from above. Be sure to place an x after each number.</p>	
<p>3) Find the GCF of each row and column and write it in the corresponding area. Write these as the two binomials for the factored form.</p>	<p>Factored Form:</p> <p>_____</p>
<p>4) Check you work by multiplying the binomials together to see if you get your original trinomial.</p>	

1) $3x^2 + 8x + 5$

2) $4a^2 - a - 5$

3) $4x^2 - 11x + 6$

4) $3x^2 + 17x + 10$

5) $6x^2 - 5x - 1$

6) $2m^2 + 5m + 2$

7) $6m^2 - 11m - 10$

8) $4v^2 - v - 14$

Factoring – Special Cases

When factoring quadratics, there are two types of special cases.

Difference of Two Squares $(x^2 - a^2) = (x + a)(x - a)$

Perfect Square Trinomials $((ax)^2 + 2abx + b^2) = (ax + b)^2$

$$((ax)^2 - 2abx + b^2) = (ax - b)^2$$

When factoring quadratics that are special cases, you can still factor in the same way that we have previously done. The only difference is that you may have to add a 0 term in your expression or change the way you write final answer.

1) $x^2 + 12x + 36$

2) $x^2 - 9$

3) $4x^2 - 25$

4) $4x^2 - 16x + 16$

5) $x^2 + 20x + 100$

6) $9x^2 - 16y^2$
